The Viper 2000 control system is the top of the line regulation for controlling all the climate component in a bus or coach for up to three climate zones. Using the Viper 2000 you only set the desired temperature for driver's place and passenger compartment, pressing the "AUTO" button, and then the control unit will adjust AC / heat output, fans, flaps etc. accordingly. The Viper 2000 is also very useful when troubleshooting, since it is possible to enter test mode and manually control each climate component.

Viper 2000 control system structure

1. Viper 2000 Control panel
2. Climate control node

Voltage	28 VDC
Weight, control panel	0,3 kg
Weight, control node	0,5 kg
Dimensions	Car-stereo size, see product sheet
