

Global Defroster

Clear windscreens and comfortable climate – choose the modules to suit your vehicle

Defroster on its own? Or defroster and air conditioning? With the MCC Defroster Global you can choose the modules you want – and choose where you put them. The Defroster Global is specially designed to be used in large vehicles as a defroster with air conditioning as an option. Thanks to its module-based construction, you can flip or turn defroster components to suit your specific requirements.

Water connection can be switched from right to left, air filter can be placed in front of or behind the heat exchanger or the fan can be set to suction or pressure.

Features

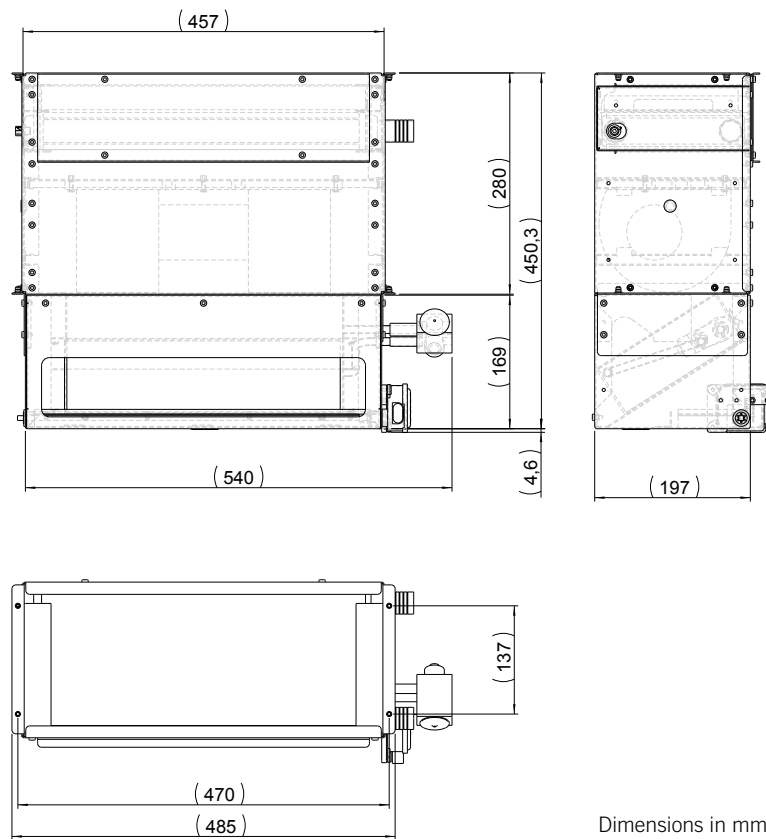

- Designed for large vehicles such as buses and marine applications
- Module based system
- Complete with fan, heat exchanger, filter and recirculation flap
- Compact size
- Very easy to change left/right water connection, filter before/after fan etc. thanks to module based design
- Can be ordered with or without evaporator (for driver A/C)

All these changes and more are easily made in just a couple of minutes.

And the Defroster Global won't be taking up any extra valuable space. If a compact defroster is what you're looking for then the Defroster Global with its very small dimensions is the right choice.
