

# Examples of climate systems for buses and coaches

## Basic solution

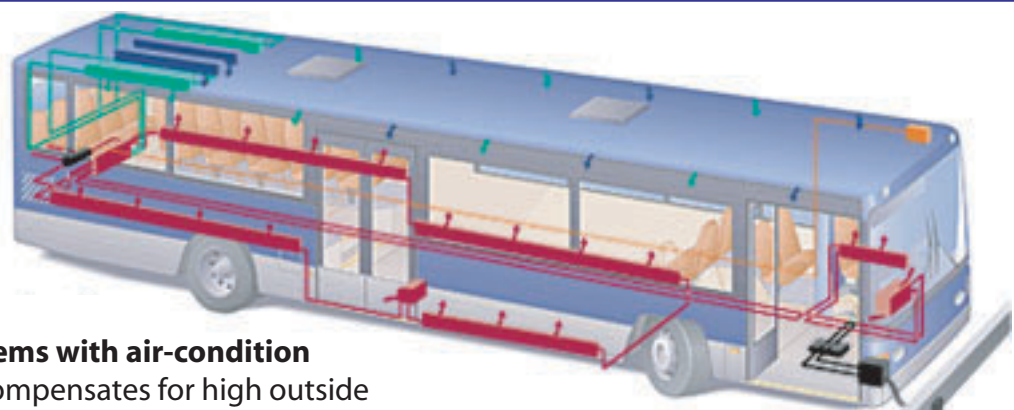

An excellent basis for a modular climate system might consist of:

- Convector/Radiators
- Blower heater
- Defroster
- Distribution central
- Electronics

## T.S.V (Temperature Stabilised Ventilation)

Thanks to the flexible design of our base solution it is easy to add temperature stabilised ventilation. The result is comfort enhancing ventilation, despite outside low temperature.

## Complete systems with air-condition

Air-condition compensates for high outside temperatures. With Basic and TSV as a starting point, adding air-condition gives full control over the onboard climate, no matter the weather conditions outside.
